Prove that parallelograms on equal bases and having the same (or equal) altitude are equal in area.

Given:

Parallelogram ABCD, EFGH are on equal base

 $\overline{BC}$  and  $\overline{FG}$ , having equal altitudes.

To prove:

Area of (parallelogram ABCD) = Area of

EFGH).

Construction: Place the parallelograms ABCD and EFGH

line BCFG. Join BE and CH.

## Proof:

## Statements

The given ||gm ABCD and EFGH are between the same parallels.

Hence ADEH is straight line | to BC

> mBC = mFG= mEH

Now mBC = mEH and they are parallel.

BE and CH are both equal and parallel.

> Hence, EBCH is a parallelogram.

Now ||gm ABCD = ||gm EBCH (i)

But || gm EBCH = || gm **EFGH** (ii)

Hence, area (||gm ABCD) = Area ((||gm EFGH)

## Reasons

Their altitudes are equal. (Given)

Given EFGH is a parallelogram.

A quadrilateral with two opposite sides congruent and parallel is a parallelogram. Being on the same base BC and between the same parallels. Being on the same base EH and between the same parallels. From (i) and (ii)
